

HOW TO: Set Up MotorWeb VIR Checks for Australian Customers

Australian customers are able to retrieve basic vehicle data for the Australian market via MotorWeb AU. This functionality is only enabled on Appraisals (not available when adding new Listings).

BILLING

Unlike MotorWeb NZ the client does not require a billing relationship with MotorWeb AU. MotorWeb AU bill AutoPlay directly and there is a report available to retrieve the breakdown of transactions for on charging. The cost is \$0.64AUD + GST for a successful transaction and \$0.15AUD for each failed transaction.

USING MOTORWEB AU TO RETRIEVE APPRAISAL DETAILS

The Vehicle Checks section will be visible in the Appraisal Form for all users. To run a successful Vehicle Check you can either;

- Enter Registration No AND Location/State
- Enter VIN AND Location/State

Running a Vehicle Check will not create a viewable PDF/report, but will return the following information;

- | | |
|-----------------|-----------------|
| 1. Registration | 5. Variant |
| 2. VIN | 6. Fuel Type |
| 3. Make | 7. Transmission |
| 4. Model | 8. Year |

(Note – additional fields such as Doors, Body Type, Drive Type and Engine Details are returned but not visible on the Australian version of the Appraisal Form)

HOW TO SET UP A DEALERSHIP WITH MOTORWEB AU ACCESS

1. Set up API record within API Management screen
MotorWeb AU does not need an API key as they bill AutoPlay directly and we then on-bill.

The MotorWeb button is always visible unless disabled by either marking the API record as inactive, or by adding a Dealer API record for MotorWeb and marking that record as Inactive

2. Set up Role Management in Role Management screen.

3. Add Yards to turn on for the yard the lead is on
4. Add Users to turn on for the user completing the appraisal
5. Button is always visible - If user not added to the role then they get a message asking them to get their manager to request access via AutoPlay
